

## Implementing Routine HIV Testing in Health Care Settings

Did you know that routine HIV testing in health care settings will prevent disease transmission, reduce hospital readmissions and decrease health care costs? In 2006, the Centers for Disease Control and Prevention issued guidelines recommending routine HIV testing for all patients aged 13-64. This course assists health care providers in the implementation of routine HIV testing. The course contains information on testing technology, consent for testing, delivery and reporting of positive results.

### Lesson Topics:

- Making the case for Routine HIV Testing
- Basics of HIV Testing
- Offering an opt-out HIV test
- Delivering HIV test results
- Implementing a Routine HIV testing program in your practice
